- Case study – JBS Foods

### Case study: JBS Foods

One significant attack occurred at a **global meat supply company** called JBS Foods.

JBS have over 150 plants across 15 different countries, with 150,000 employees worldwide. They supply meat to large food chain companies including McDonald's and KFC.

As JBS has staff and plants worldwide, the company used a centrally connected system to store their information. This system was **hacked by ransomware** in 2021, causing a 5 day shutdown that stopped its operations globally and threatened Australia's meat supply chain.

(Rosenbaum, 2021)
